Education

National Institute of Technology, Rourkela

Bachelor of Technology, Industrial Design

Sep 2023 - Present

Rourkela, Odisha

Guru Nanak Public School, Sambalpur

CBSE, Science (PCM)

May 2023

Sambalpur, Odisha

Work Experience

Auric AI Labs

SDE Intern

Apr 2026 - Jul 2026

Remote

- Applied backend engineering to build a data processing pipeline that automated a 5-step satellite imagery workflow, including ordering, storage, CVAT loading, QC enforcement, and analytics upload, eliminating manual handoffs for 10+ defense analysts.
- Developed custom MCP servers as an internal tooling layer and designed a centralized KML spatial database engine using distributed systems principles, enabling 12 concurrent analysts to edit geospatial data with accurate real-time rendering in Google Earth.

N6T Technologies

Full Stack Intern

Jun 2025 - Aug 2025

Rourkela, Odisha

- Engineered an Electronic Health Record (EHR) API integration for Sysmex laboratory analyzers that automated clinical data entry, eliminating 95% of manual transcription errors and reducing processing time by 40% across 3 hospital environments.
- Provided client-side troubleshooting and production deployment support in regulated healthcare settings, maintaining 99.5% system uptime and ensuring compliance with medical data handling standards.

Projects

Oxide - Self-Hosted Deployment Platform [GitHub](#)

Jun 2026

- Designed and shipped a self-hosted deployment platform in Rust across a 9-module Cargo workspace, reducing container sizes by 89% versus Docker-only baselines through Nix-based reproducible builds.
- Hosted 6+ applications concurrently on a single VM using Pingora for programmatic reverse proxying and Docker/Bollard for isolated, reliable runtimes.

SahayAI - Legal RAG Agent [GitHub](#)

Mar 2026

- Built an AI RAG pipeline for legal document QA, processing 500+ page PDFs with OCR ingestion, hybrid retrieval in Qdrant (1M+ vectors), and cross-encoder reranking to achieve 92 percent answer accuracy.
- Achieved sub-2-second API query latency with citation-grounded responses; deployed the service to Google Cloud Run for 10+ concurrent users with CI/CD via GitHub Actions and compliance-aware data isolation.

Polynotes - Offline Transcription App [GitHub](#)

Feb 2026

- Integrated whisper.cpp via Native FFI into a Rust/Tauri Desktop App for On-Device Offline Transcription, Shipping a 10.8MB Binary with 2-4 Second Live Latency.
- Implemented WebRTC VAD Gating to Filter Silence Before Inference, Eliminating Hallucinations and Supporting Multilingual Code-Switching Across 6+ Indian Languages.

Achievements/Certifications

- **Baker Hughes Virtual Hackathon 2025:** October 2025. Achieved Finalist status (Top 7) in the Baker Hughes Hackathon 2025 by engineering 'Smart Sentry,' a multi-phase anomaly detector that improved fault identification accuracy by 86 percent across 3 distinct turbofan operational states.
- **IEEE Medhamanthan 2025:** June 2025. Secured 3rd place at IEEE Medhamanthan 2025 for a cost-effective AI-based leukemia detection system.

Technical Skills

- **Languages:** Rust, Python, TypeScript, C++, Bash, WASM
- **Operating Systems:** Ubuntu, Linux
- **Developer Tools:** Git, Docker, Nix, cargo, bindgen, CMake, Postman, VS Code, IntelliJ IDEA
- **Cloud & Infrastructure:** Terraform, Grafana, Prometheus, GitHub Actions, Kubernetes, Distributed Systems, Production-grade Software Development
- **Technologies/Frameworks:** Tauri, SolidJS, Axum, Pingora, Next.js, Flask, SQLite, Tailwind CSS, Backend Engineering, Systems Design, Software Architecture, APIs, Databases
- **Systems Programming:** Rust, Software Architecture, Systems Programming

Extracurricular Activities

rust-bitcoin/rust-bech32

2026

Open Source Contributor

- Merged pull request replacing mutagen with cargo-mutants for mutation testing in the rust-bech32 crate, improving CI pipeline reliability and test coverage validation after maintainer code review.
